Summary

Experienced in building tools that leverage computer vision, NLP, and automation to solve real problems efficiently. Passionate about open-source projects and using technology to automate tedious repetitive tasks.

Education

Michigan State University

Aug 2022 - May 2026

Bachelor's of Science in Computer Science, Minor in Data Science

GPA: 3.8

- **Coursework:** Object Oriented Software Design in C++, Algorithm Engineering, Web Application/Architecture Development.
- **Experiences:** Electronics Bay Engineer at MSU Rocketry and 3 time Hackathon Winner

Work Experience

Student Library Assistant - Digital Multimedia Center MSU Library

Jan 2023 - Present

- Designed and maintained open source tools, including Callsort, a Rust-based call number sorter, and a Python web scraper that automates media deal discovery for the library catalog, saving staff time and library budget.
- Managed front-desk operations, managing room and library checkouts while employing the LCC and ROVI classification systems to shelve and retrieve media.

Data Science Intern - iSON Xperiences Ltd.

Jul 2023 - Aug 2023

- Conducted an EDA and trained a model on a 1.85 million data-point dataset to identify paying customers with 87% accuracy and prioritize calling them on the call center rotation.
- Automated data set retrieval weekly with Selenium and Python, saving 1.5 hours per week and reducing human error.

Projects

OpenFiche - Spartahack 2025 (Winner - Specialized Mastery)

- Developed and hosted a search engine with React and Flask that filters out AI pages to preserve high quality, human generated content, ranked results using a custom PageRank-based algorithm.
- Built a lightweight, research-focused web browser with QT featuring a graph history manager and an advanced reader mode to enhance reading and tab management.
- Engineered a web crawler to index 320,000+ pages from NPR, CNN, and Wikipedia, leveraging NLTK for NLP keyword analysis and a weighted ranking system for improved search relevance.

Journalingo - University of Chicago Hackathon 2024 (Winner - Best use of Auth0)

- Built a video journaling app using computer vision to reveal unspoken emotions users often hide from themselves, enabling more honest self-reflection. Model demonstrated accuracy by correctly separating real journal entries from fake actors.
- Won Okta's sponsored award for proficiency in developing a secure user data pipeline with Auth0.

Wolverine Helper - MHacks Submission 2024

- Embedded Meta's open source Llama 3 LLM with data from UofM coursework to boost accuracy on course related questions by 80% and encourage learning with a "Show don't tell" teaching technique.
- Developed a tool to modularly vectorize any text, PDF, website on the model.

Skills

Python, C++, Rust, Process Automation, Automated Testing, AI/ML, Computer Vision
