

Amrit Srivastava

(517) 980-3378 | srivas75@msu.edu | amrits.dev | github.com/swefton

EDUCATION

Michigan State University

GPA: 3.7

Bachelor of Science in Computer Science, Minor in Data Science

Aug 2022 – May 2026

Experiences: 3x Hackathon Winner, Electronics Bay Engineer MSU Rocketry

EXPERIENCE

AI Robotics Research Assistant

June 2025 – Present

Action Lab

- Built city-scale outdoor simulation environments with dynamic objects in Isaac Sim to evaluate frontier-based or goal-oriented algorithms for embodied question-answering (EQA) on micro-mobility robots
- Implemented ROS2 robot control enabling integration of exploration algorithms and sensor output with OpenCV and Matplotlib - creating realistic simulations of micro-mobility robots navigating cities
- Authored internal documentation and guides for Isaac Sim, consolidating lessons learned to accelerate team adoption and collaboration

Student Library Assistant

Jan 2023 – Present

Digital Multimedia Center MSU Library

- Noticed inefficiencies in cataloging and acquisitions, proposed a fix, then independently built and deployed open-source tools that automated media sourcing and organization — saving staff time and cutting costs
- Oversaw daily front-desk operations, facilitating room and media checkouts and shelving using the LCC and ROVI classification systems, ensuring fast and accurate resource retrieval for patrons.

Data Science Intern

July 2023 – Aug 2023

iSON Xperiences Ltd.

- Conducted an EDA and trained a machine learning model on a 1.85 million data-point dataset to identify payment-likely customers with 87% accuracy, enabling prioritized call center outreach significantly cutting costs
- Assigned to architect and deploy a secure data pipeline with Web Scraping and Python - leveraging prior scripting expertise - saving 1.5 hours/week and reducing human error

PROJECTS

OpenFiche | Spartahack 2025 (Winner - Specialized Mastery)

reada.wiki

- Developed and deployed a search engine with React and Flask that relegates AI pages to preserve high quality, human generated content - ranked results using a custom PageRank-based algorithm
- Engineered a web crawler to index 320,000+ pages from reputed journals and implemented natural language processing, keyword analysis and a ranking system to derank AI pages
- Built a lightweight, research focussed web browser that displayed your browsing history as an undirected graph, a well loved feature that was ported to Chrome after multiple requests

Callsort | Digital Multimedia Center MSU Library

- Developed a cross-platform application to sort Library of Congress Classification (LCC) call numbers, solving a cataloging problem unsolved by Excel and other spreadsheet software.
- Engineered a novel parsing and sorting algorithm, first prototyped in Python and then optimized in Rust to sort millions of records with near real-time performance
- Implemented a GitHub Actions CI/CD pipeline to automatically build and release binaries across platforms

TECHNICAL SKILLS

Languages: Python, C++, Rust, Javascript

Skills: Process Automation, Software Development, Web Technologies, Artificial Intelligence, Machine Learning, Computer Vision, Natural Language Processing
