

Amrit Srivastava

(517) 980-3378 | srivas75@msu.edu | amrits.dev | github.com/swefton

EDUCATION

Michigan State University

GPA: 3.7

Bachelor of Science in Computer Science, Minor in Data Science

Aug 2022 – May 2026

Experiences: 3x Hackathon Winner, Engineer MSU Rocketry

EXPERIENCE

Student Library Assistant

Jan 2023 – Present

Digital Multimedia Center MSU Library

- Noticed inefficiencies in cataloging and acquisitions, proposed a fix, then independently built and deployed open-source tools and Python scripts to automate sourcing media — saving staff time and cutting costs
- Built a faster, image-rich MSU gaming catalog viewer by enriching metadata through IGDB API with Python and optimizing MongoDB performance interfaced over a responsive React frontend
- Coordinated front-desk operations by facilitating room and media checkouts, maintained a 10,000+ item catalog through routine shelving and LCC/ROVI organization to ensure resource accessibility

AI Robotics Research Assistant

June 2025 – Jan 2026

Action Lab

- Evaluated the safety and performance of newly published robot navigation algorithms by developing a realistic city-scale environment with NVIDIA Isaac Sim featuring high-density vehicle and pedestrian traffic
- Developed a ROS2 middleware that connected simulated robots to external computer vision algorithms, allowing the team to “plug-and-play” research algorithms without rebuilding the simulation which reduced compute time
- Authored detailed documentation with annotations and pictures to accelerate team adoption

Data Science Intern

July 2023 – Aug 2023

iSON Xperiences Ltd.

- Conducted an EDA and trained a machine learning model on a 1.85 million data-point dataset to identify payment-likely customers with 87% accuracy, enabling prioritized call center outreach significantly cutting costs
- Architected and deployed a secure data pipeline with web scraping (Selenium) and Python to script and automate data ingestion from our ERP — saving 1.5 hours/week and reducing human error

PROJECTS

OpenFiche | *Spartahack 2025 (Winner - Specialized Mastery)*

reada.wiki

Python, React, Natural Language Processing, Algorithm Engineering

- Built and deployed a search engine that surfaces human-authored content by leveraging natural language processing and adapting Google's PageRank search algorithm to demote low-quality autogenerated pages
- Built a lightweight, research focused web browser that displayed your browsing history as an undirected graph, a well-loved feature that was ported to other browsers after multiple requests

Callsort | *Digital Multimedia Center MSU Library*

Rust, React, CI/CD, Algorithm Engineering

- Built a cross-platform tool to sort spreadsheets with LCC call numbers (the alphanumeric standard used to organize library materials), solving a common limitation in software like Excel
- Engineered a novel parsing and sorting algorithm implemented with Rust concurrency design patterns to perform millions of sorting and string operations in fractions of a second

TECHNICAL SKILLS

Languages & Frameworks: Python, C++, Rust, Swift, JavaScript, React, MongoDB

Skills: Process Automation, Software Development, Web Technologies & Automation, Artificial Intelligence, Machine Learning, Computer Vision, Natural Language Processing, Linux Systems
